

KNOW WHAT'S IN YOUR AIRSPACE.

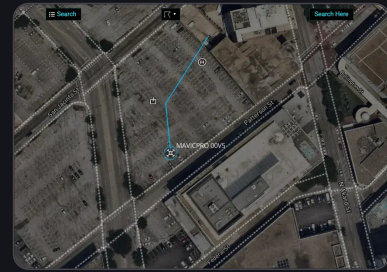

Aerial drone threats are one of today's fastest-growing security concerns, used for surveillance, contraband delivery, and disruption. **XGen Mobile** helps you deploy a proven drone-detection platform that detects and tracks drones and their pilots in real time, and arms your security team with live airspace data.

Detect and track drones

Multi-layer sensing

FAA-compliant platform

Delivered and supported by XGen

Know what's in your airspace, in real time.

Detect and track drones and their pilots, with live data for your security team.

Real time

Live detection and tracking as drones enter your airspace

Drone + pilot

Locate the aircraft and, where possible, the operator

24/7

The platform watches your airspace around the clock

Platform capabilities are those of the manufacturer and depend on site conditions and the sensor mix deployed.

WHAT IT DOES

Full awareness of your airspace

- Detect and Track**
Spot and follow drones in real time as they enter your airspace.
- Multi-Layer Sensing**
Remote ID, RF and direction finding, radar, and cameras work together.
- Turnkey Delivery**
A complete platform we deliver and support, not a project your team has to build.
- Find the Pilot**
Locate the aircraft and, where possible, the operator on the ground.
- FAA-Compliant Platform**
A passive, detection-only system designed to operate within FAA rules.
- 24/7 Monitoring**
Around-the-clock airspace awareness with live data for security.

HOW IT WORKS From site assessment to a live airspace picture

- Assess Your Site**
We start with your property, risk profile, and airspace to scope the right sensor mix.
- Layered Sensors**
Remote ID, RF direction finding, radar, and camera layers are installed for your site.
- Live Airspace Map**
Every drone and, where possible, its pilot appears on one real-time map.
- Alerts Your Team**
Security gets live alerts and track data the moment a drone appears.
- XGen Support**
We bring the solution, guide the rollout, and support you after go-live.

Platform capabilities and compliance characteristics are those of the manufacturer. Detection depends on site conditions and the sensor mix deployed.

Detect. Track. Respond.
