

NOBODY CLEANS ALONE.

A lanyard safety button with two jobs. **One alerts your supervisor. The other reaches 911** with the work-site location set for that button.

CONTRACTOR STARTER Everything for the first year.
\$3,999

- ✓ **Five G2 safety buttons**, yours to keep
- ✓ **Cellular service included**, no data plan per button
- ✓ **E-911** with your work-site location
- ✓ **Training** for your crews

Renewal locked in writing: years 2 and 3 at \$2,343 a year. About \$2.19 per person per day in year one. Order by December 31, 2026.

Alone, at night

Working alone or in small numbers, and working late at night, are two of the workplace violence risk factors named in OSHA's enforcement directive, whose general recommendations include panic buttons.

Source: OSHA CPL 02-01-058, Enforcement Procedures and Scheduling for Occupational Exposure to Workplace Violence (2017). An enforcement directive, not a standard.

2 Two buttons, two jobs

A press of the side button alerts your supervisor. The E-911 button takes several deliberate presses, so it is not set off by accident.

Help knows where to go

E-911 alerts go out through RapidSOS with the work-site location set for that button.

Nothing to install

No wiring, no servers, nothing left at a customer site. The buttons run on their own cellular, not the building's Wi-Fi. Worn as an ID badge, charged by USB-C about every 90 days. Charge life varies with use.

HOW IT WORKS

- 1 A night cleaner, day porter, or floor tech presses the button.
- 2 Your supervisor gets a real-time alert on their phone.
- 3 For an emergency, the E-911 button reaches 911 with the work-site location set for that button.

Two buttons. Worn as an ID badge.

Also available: wall-mounted panic buttons for your own office or shop. These require installation and a network connection.

Let's talk about your crews.

Tell us who works alone, and when. We will help you decide what you need.

Connected safety and communication solutions for janitorial and building services. *Detect. Alert. Respond.*

PREPARE TODAY. PROTECT TOMORROW.

In Washington, a panic button for isolated janitorial workers is the law. In most other states it is a duty-of-care decision, and the federal risk factors are already written down.

— WHERE THE RULES STAND

- **Washington** requires property services contractors to provide a panic button to each isolated employee, including janitors who work where coworkers cannot immediately respond. The duty has applied since 2021; L&I enforcement and civil penalties took effect January 1, 2026. Contractors also file an annual work-site report with L&I, first due January 31, 2027.
- **California** requires janitorial employers to register with the Labor Commissioner and provide sexual violence and harassment prevention training under the Property Service Workers Protection Act. It does not require a panic button.
- **OSHA** names working alone and working late at night as workplace violence risk factors, and lists panic buttons among its general recommendations. That is an enforcement directive, not a standard.
- **Most other states** have no panic button requirement for janitorial workers today. Rules change; confirm yours.

— PRICING

Starter package	Everything for the first year: five G2 safety buttons that are yours to keep, cellular service, E-911, and training for your crews.	\$3,999
Additional buttons	Add a person any time. Button and one year of connectivity.	\$365.92 each
Years 2 and 3	Communicator, cellular, and E-911 renewal. Locked in writing for orders by December 31, 2026.	\$2,343 / yr

Pricing reflects current supplier rates for orders placed by December 31, 2026. Year 4 renewals are quoted at supplier pricing then. Taxes and fees not included.

— COMMON QUESTIONS

Who owns the buttons?

You do. They are a one-time purchase in year one.

What does a supervisor see?

A real-time alert on their phone when the button is pressed.

Do the buttons need the customer's Wi-Fi?

No. Each button has its own cellular connection, and the service is included.

Our crews move between buildings. Where does 911 go?

E-911 sends 911 the work-site location set for that button, not the worker's live position. Your supervisor can see where the worker is in the G2 Communicator if someone is monitoring it. Tell us your sites and we will walk through setup for crews that move between buildings.
