

HIGH-SPEED INTERNET, WHEREVER WORK IS.

Starlink's low Earth orbit satellite network brings high-speed, low-latency broadband to the places ground networks don't reach: remote sites, vehicles on the move, and vessels at sea. XGen Mobile delivers it through authorized Starlink distribution and runs it as one managed program.

Low Earth orbit

Low latency

Land and maritime

Rapid deployment

High-speed internet, wherever work happens.

Low-latency broadband for remote sites, vehicles on the move, and vessels at sea, as one managed program.

100-400 Mbps

Download speeds reported for Starlink's LEO service tiers

~20 ms

Latency low enough for video calls and cloud applications

Land + Sea

Coverage for fixed sites, land mobility, and maritime routes

Performance figures as reported for Starlink service tiers; actual results vary by location and plan.

WHAT IT DOES

Broadband beyond the reach of ground networks

Rapid Deployment

Stand up high-speed connectivity in places ground networks don't reach.

Redundancy and Failover

A resilient path when wired or cellular links go down.

Flexible Service Plans

Land, mobile, and maritime plans matched to how you operate.

Beyond Ground Networks

Broadband for remote sites, mobility, and vessels at sea.

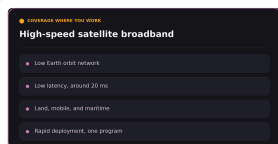

Crew and Staff Welfare

Reliable connectivity for people working far from the office.

Fully Supported

Delivered through authorized Starlink distribution, as one managed program.

Coverage where you work

Low Earth orbit broadband for fixed sites, land mobility, and maritime routes, delivered and supported by XGen Mobile as one managed program.

Connect anywhere.
