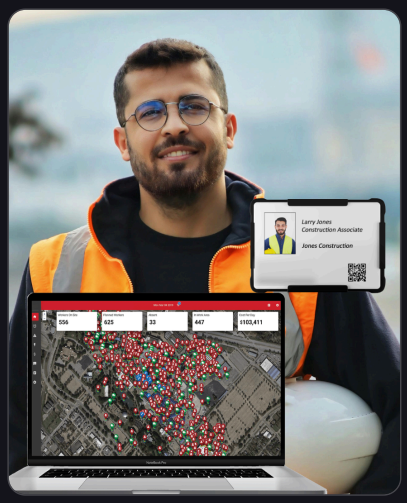
WORKER SAFETY · CONSTRUCTION

TOTAL VISIBILITY ON EVERY JOBSITE.

One connected platform for safety, time, and productivity. A cellular wearable keeps eyes on every worker, captures hours automatically, and turns the jobsite into real-time data, with no on-site infrastructure to install.

Plug and Play | **Deploys in Days** | **Nationwide Cellular** | **Zero Infrastructure**



Protect crews. Capture hours. Stay on schedule.

One clip-on cellular device for worker safety, automated timekeeping, and live jobsite visibility, indoors and out.

~1 in 5	#1	Instant
of U.S. workplace deaths are in construction	Falls are the leading cause of construction fatalities	Alert notification to supervisors and your response team

Fatality statistics: U.S. OSHA. Instant alerting is a device capability, subject to cellular coverage.

WHAT IT DOES

One wearable, a safer and sharper jobsite

Worker Safety
A deliberate multi-press SOS, automatic fall and no-motion detection, lone-worker protection, and customizable alert notifications to supervisors and your response team.

Automated Timekeeping
Hands-free clock-in and out on any site, including remote pours and night shifts. No phone apps or punch cards.

Tool and Equipment Tracking
Cellular GPS trackers attach to equipment from any manufacturer, with geofenced zone alerts the moment machines leave the site and usage data for your reports.

Exclusion Zones
Geofence cranes, excavations, and hot-work areas, and get alerted the moment a worker enters a restricted zone.

Location and Headcount
Precise outdoor GPS and indoor location down to the floor, with live headcount by zone across the whole project.

Zero Infrastructure
Runs on nationwide cellular, so it works the moment crews reach a new site. Nothing to build, learn, or log into.

The wearable SOS and panic device

A rugged, waterproof, cellular-connected wearable with a deliberate multi-press SOS, automatic fall and no-motion detection, and live location. Clips on and works the moment crews reach the site.

Detect. Alert. Respond.
