

— WORKER SAFETY · CONSTRUCTION

TOTAL VISIBILITY ON EVERY JOBSITE.

One connected platform for safety, time, and productivity. A **cellular wearable** keeps eyes on every worker, captures hours automatically, and turns the jobsite into real-time data, with no Wi-Fi, beacons, or on-site infrastructure to install.

Plug and Play

Deploys in Days

Nationwide Cellular

Zero Infrastructure

Protect crews. Capture hours. Stay on schedule.

One clip-on cellular device for worker safety, automated timekeeping, and live jobsite visibility, indoors and out.

~1 in 5

of U.S. workplace deaths are in construction

#1

Falls are the leading cause of construction fatalities

Instant

Alert notification to supervisors and authorities

Fatality statistics: U.S. OSHA. Instant alerting is a device capability, subject to cellular coverage.

WHAT IT DOES

One wearable, a safer and sharper jobsite

Worker Safety

Manual SOS alerts, automatic fall detection, lone-worker check-ins, and configurable escalation to supervisors and authorities.

Automated Timekeeping

Hands-free clock-in and out on any site, including remote pours and night shifts. No phone apps or punch cards.

Tool and Equipment Tracking

Works with any manufacturer. Records usage time, in-field versus tool-crib status, and last known holder.

Exclusion Zones

Geofence cranes, excavations, and hot-work areas, and get alerted the moment a worker enters a restricted zone.

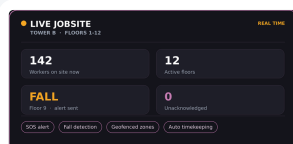

Location and Headcount

Precise outdoor GPS and indoor location down to the floor, with live headcount by zone across the whole project.

Zero Infrastructure

Runs on nationwide cellular, so it works the moment crews reach a new site. Nothing to build, learn, or log into.

One connected platform for safety, time, and productivity

The same cellular wearable that protects a worker captures the data that keeps your project on time and on budget: live headcount, automatic fall and struck-by alerts, geofenced zones, and accurate hours, mapped to the way you actually build.

Detect. Alert. Respond.
